

Here's a simple, correct database connection setup for a REST/JPQL project using [Spring Boot](#) with MySQL.

✓ 1. Create Database (MySQL)

Open MySQL and run:

```
</> SQL
```

```
CREATE DATABASE testdb;
```

✓ 2. application.properties (MOST IMPORTANT)

```
</> properties
```

```
server.port=8082
```

```
# Database Connection
```

```
spring.datasource.url=jdbc:mysql://localhost:3306/testdb
```

```
spring.datasource.username=root
```

```
spring.datasource.password=1234
```

```
# JPA Settings
```

```
spring.jpa.hibernate.ddl-auto=update
```

```
spring.jpa.show-sql=true
```

```
spring.jpa.properties.hibernate.dialect=org.hibernate.dialect.MySQLDialect
```

3. pom.xml Dependency

[Get Plus](#)

Make sure this is added:

```
<? XML
<!-- MySQL Driver -->
<dependency>
  <groupId>com.mysql</groupId>
  <artifactId>mysql-connector-j</artifactId>
</dependency>
```

Also include JPA:

```
<? XML
<dependency>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-starter-data-jpa</artifactId>
</dependency>
```

4. Entity Example (Required)

```
<? Java
@Entity
@Table(name = "patient")
public class Patient {

    @Id
    @GeneratedValue(strategy = GenerationType.IDENTITY)
    private Long id;

    private String name;
    private int age;
}
```

👉 Spring will automatically create the table using:

[Get Plus](#) 

5. How to Check Connection

When you run the project, console should show:

```
Hibernate: create table patient ...
```

OR

```
HikariPool-1 - Start completed
```

👉 This means DB connected successfully

Common Errors & Fix

1. Access denied

```
Access denied for user 'root'
```

✔ Check username/password

2. Database not found

```
Unknown database 'testdb'
```

✔ Run:

```
<? SQL
CREATE DATABASE testdb;
```
